Diseases Related to Elevated BNP

Cardiac	Non-Cardiac
<ul style="list-style-type: none">• Heart failure• Coronary artery disease• Diastolic dysfunction• LV hypertrophy• Hypertrophic CM• Restrictive CM• Constrictive pericarditis• Valvular heart disease• Atrial fibrillation• Cardiac amyloidosis	<ul style="list-style-type: none">• COPD• Pulmonary embolism• Pulmonary hypertension• Sepsis• Hypertension• Subarachnoid hemorrhage• Renal failure

Ischemic Cascade

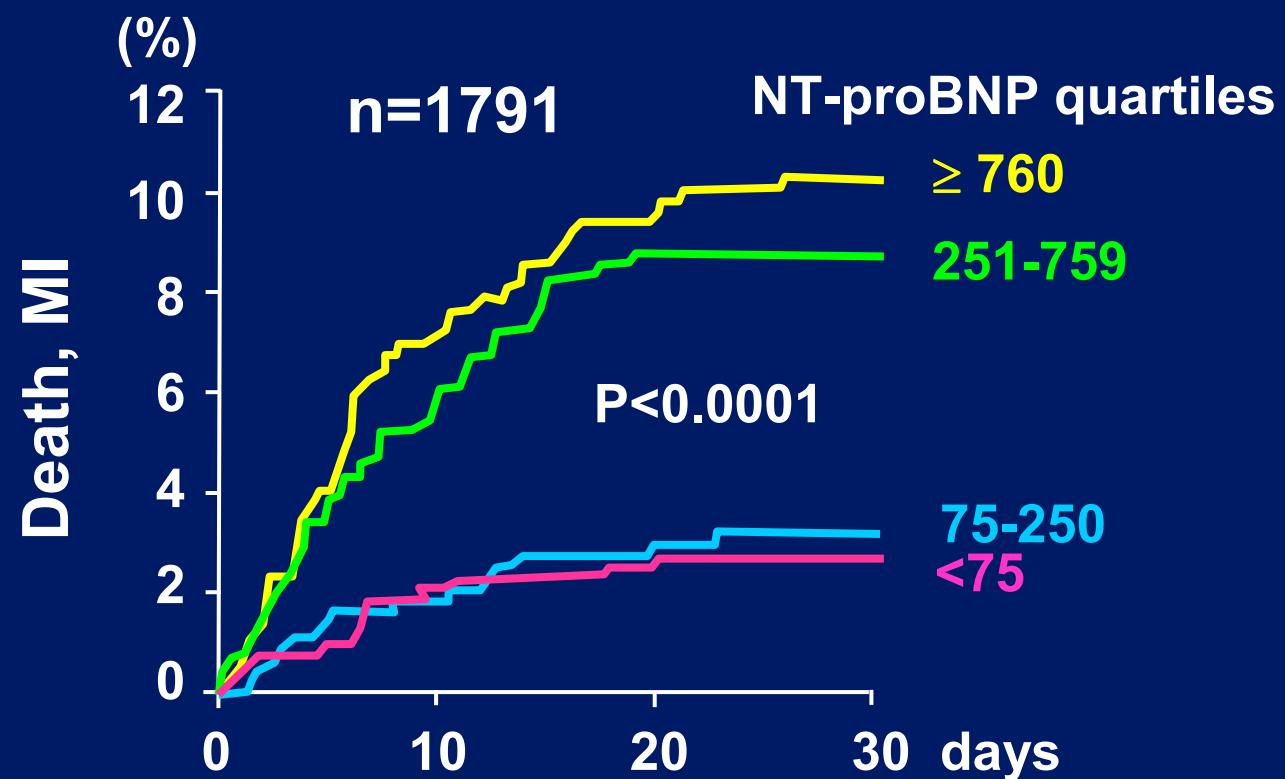

BNP in relation to myocardial ischemia

Sabatine MS et al. JACC 2004;44:1988-95

Prognostic Value of BNP in Acute Coronary Syndrome

PRISM investigators. Circulation 2004;110:3206-3212

Multivariate Analysis for Prognosis

BNP is a powerful and independent determinant beyond conventional risk markers in ACS

Variable	Risk Ratio (95% CI)	P value
Age > 66 yr-old	2.5 (1.4 – 4.3)	0.001
LVEF < 47%	1.9 (1.1 – 3.1)	0.01
Killip class >1	3.2 (1.9 – 5.5)	<0.0001
BNP > 545 pmol/L	2.1 (1.1 – 3.9)	0.02

Large Studies to Confirm the Prognostic Value of BNP in Acute Coronary Syndrome

Study	No.	Sampling time	measurement
OPUS-TIMI 16	2525	40 h post Sx	BNP
Jernberg et al.	775	Adm	NT-proBNP
TACTICS-TIMI 18	1676	Adm	BNP
FRISC II	2019	39 h post Sx	NT-proBNP
GUSTO IV	6809	9.5 post Sx	NT-proBNP
Richards et al.	666	1-4 d post Sx	both
ICTUS	1141	Adm	NT-proBNP

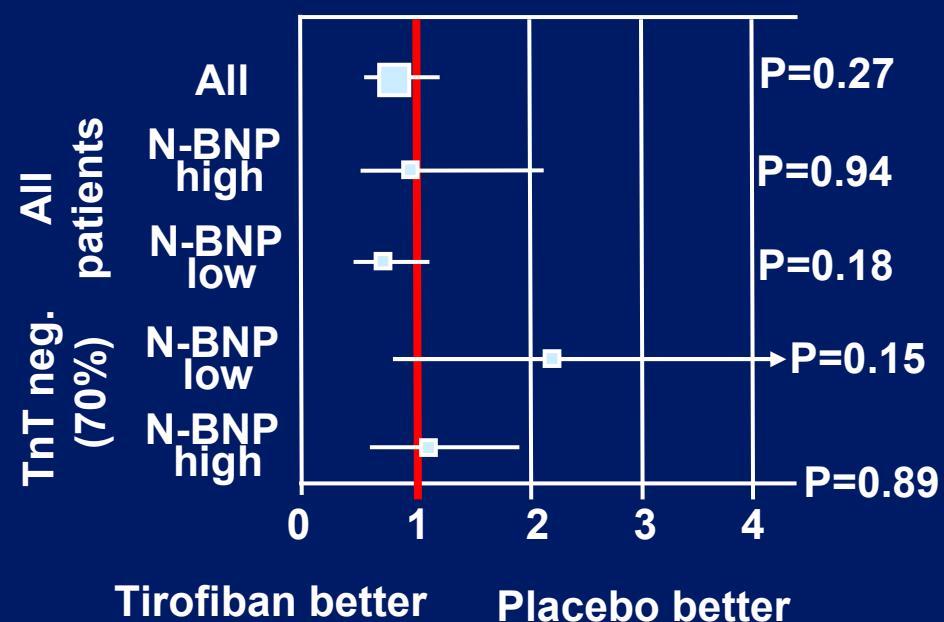

Diagnostic Value of BNP for Chest Pain Potential ACS in Emergency Setting (n=426)

Tests	Sensiti- vity (%)	Specifi- city (%)	PPV (%)	NPV (%)
Acute MI (cutoff 51 pg/ml) Myoglo, CKMB, cTnl + BNP	87.2 97.4	62.3 47.8	18.8 15.8	98.0 99.5
All ACS (cutoff 31 pg/ml) Myoglo, CKMB, cTnl + BNP	75.2 88.1	61.8 43.9	20.6 18.0	93.9 95.5

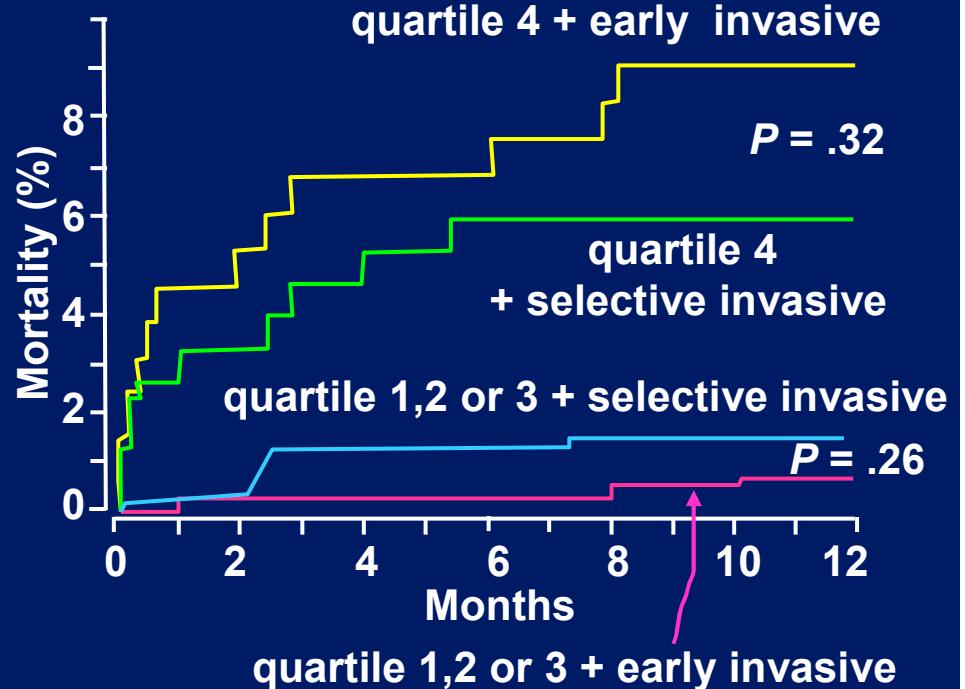

Useful adjunct to conventional markers in chest pain with non-diagnostic test

Implication of BNP on Therapeutic Strategy

GpIIb/IIIa

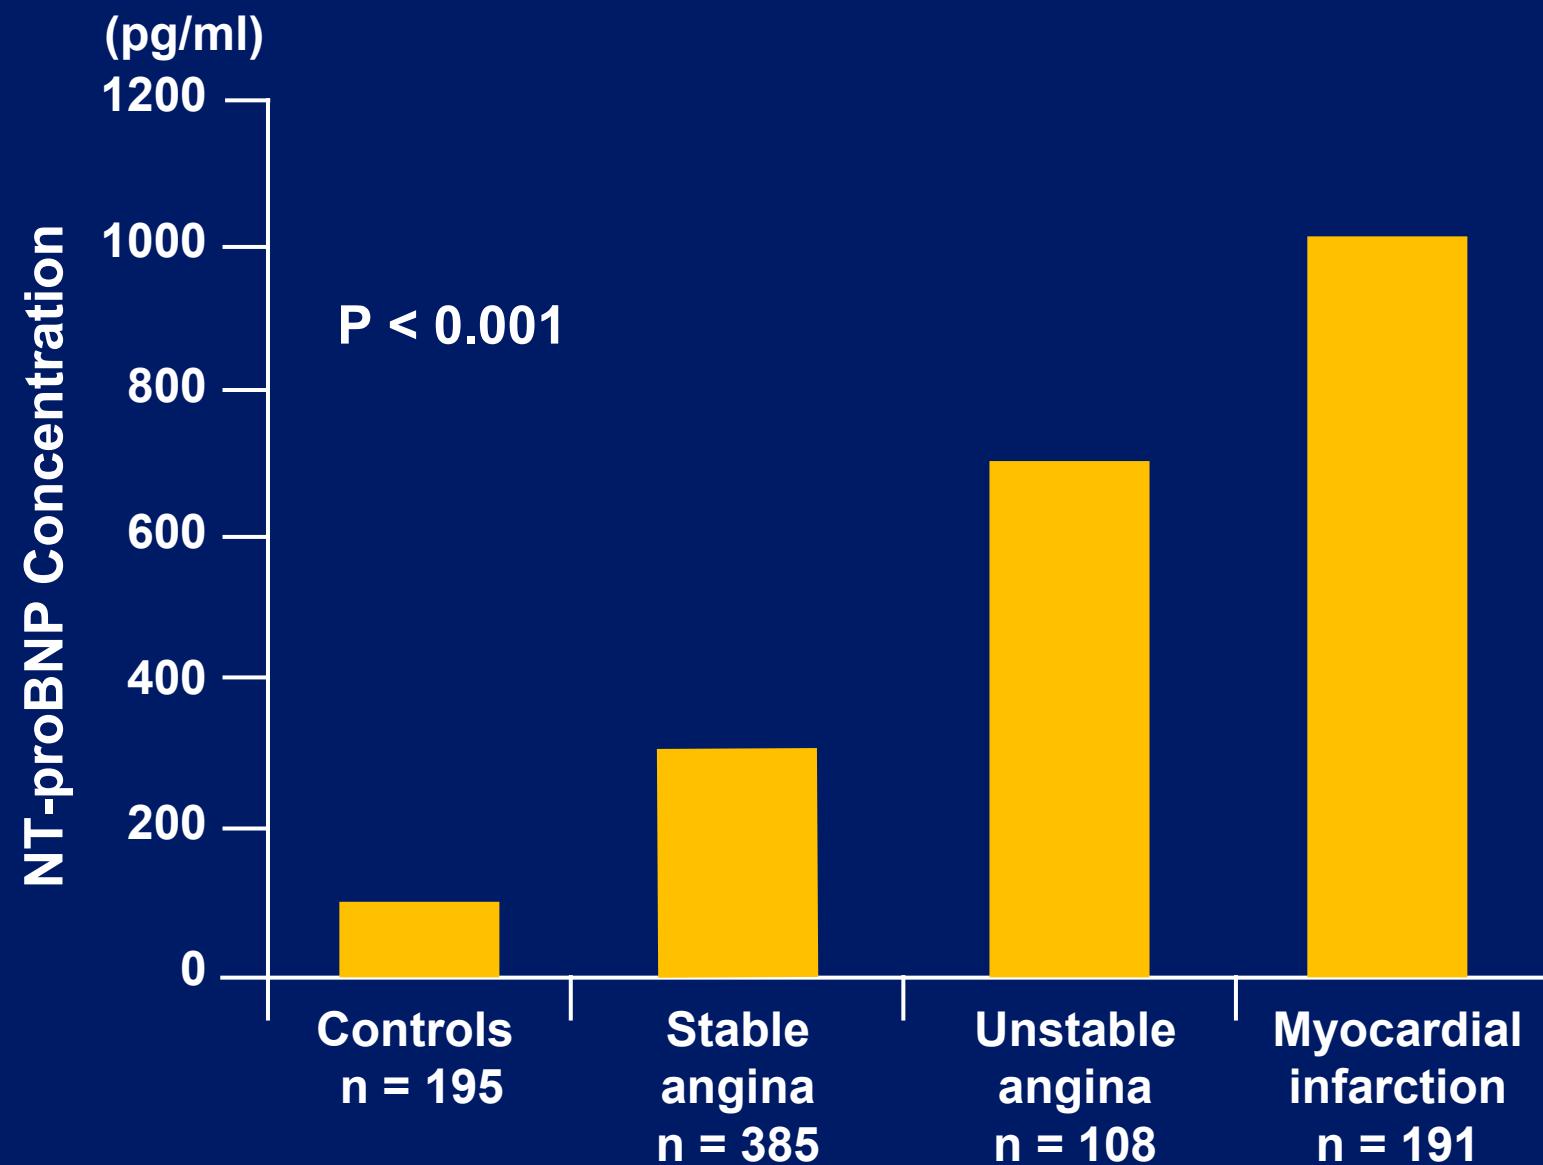

Invasive Therapy

BNP According to CAD Activity

Ndrepepa G et al. Am J Cardiol 2005;95:553-557

BNP in Stable Angina

NT-ProBNP is a Marker of Long-Term Mortality in Patients with Stable Angina (n=1034)

Kragelund C et al. NEJM 2005;352:666-675

Multivariate Analysis for Mortality

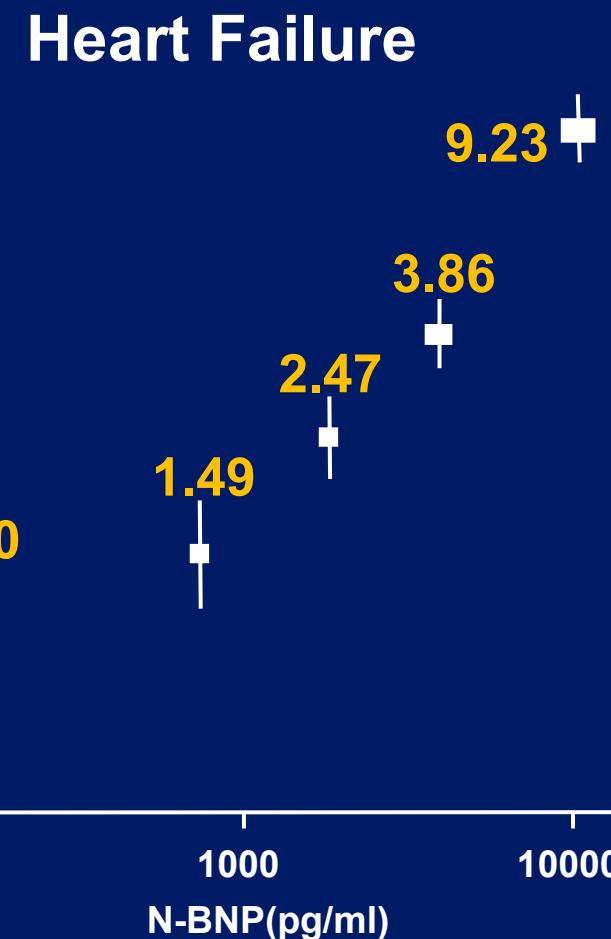

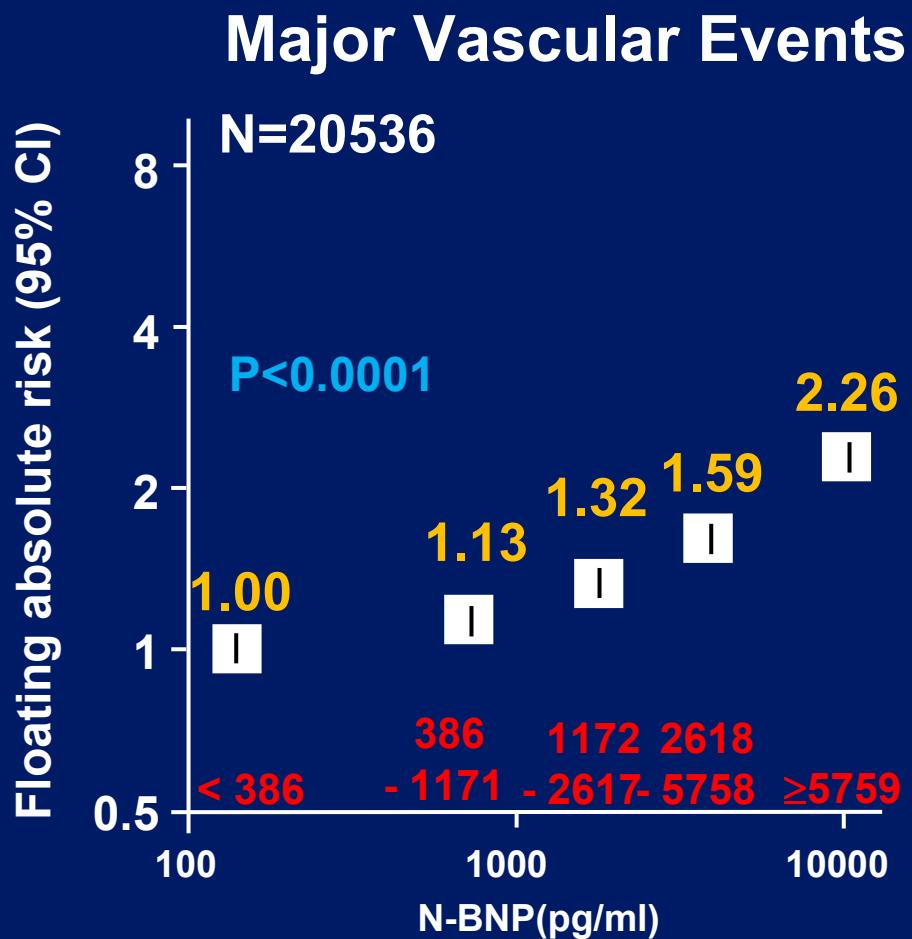

Variable	Hazard Ratio (95% CI)	P Value
NT-pro-BNP (4th vs. 1st quartile)	2.4 (1.5-4.0)	<0.001
Age (per 10-yr increase)	1.6 (1.4-1.9)	<0.001
Diabetes	1.7 (1.3-2.2)	<0.001
Cigarette smoking	1.6 (1.2-2.0)	<0.001
CAD (severe vs. none)	1.8 (1.2-2.6)	0.002
LVEF (per 10% decrease)	1.2 (1.1-1.4)	<0.001
Suspected heart failure	1.8 (1.4-2.4)	<0.001

Kragelund C et al. NEJM 2005;352;666-675

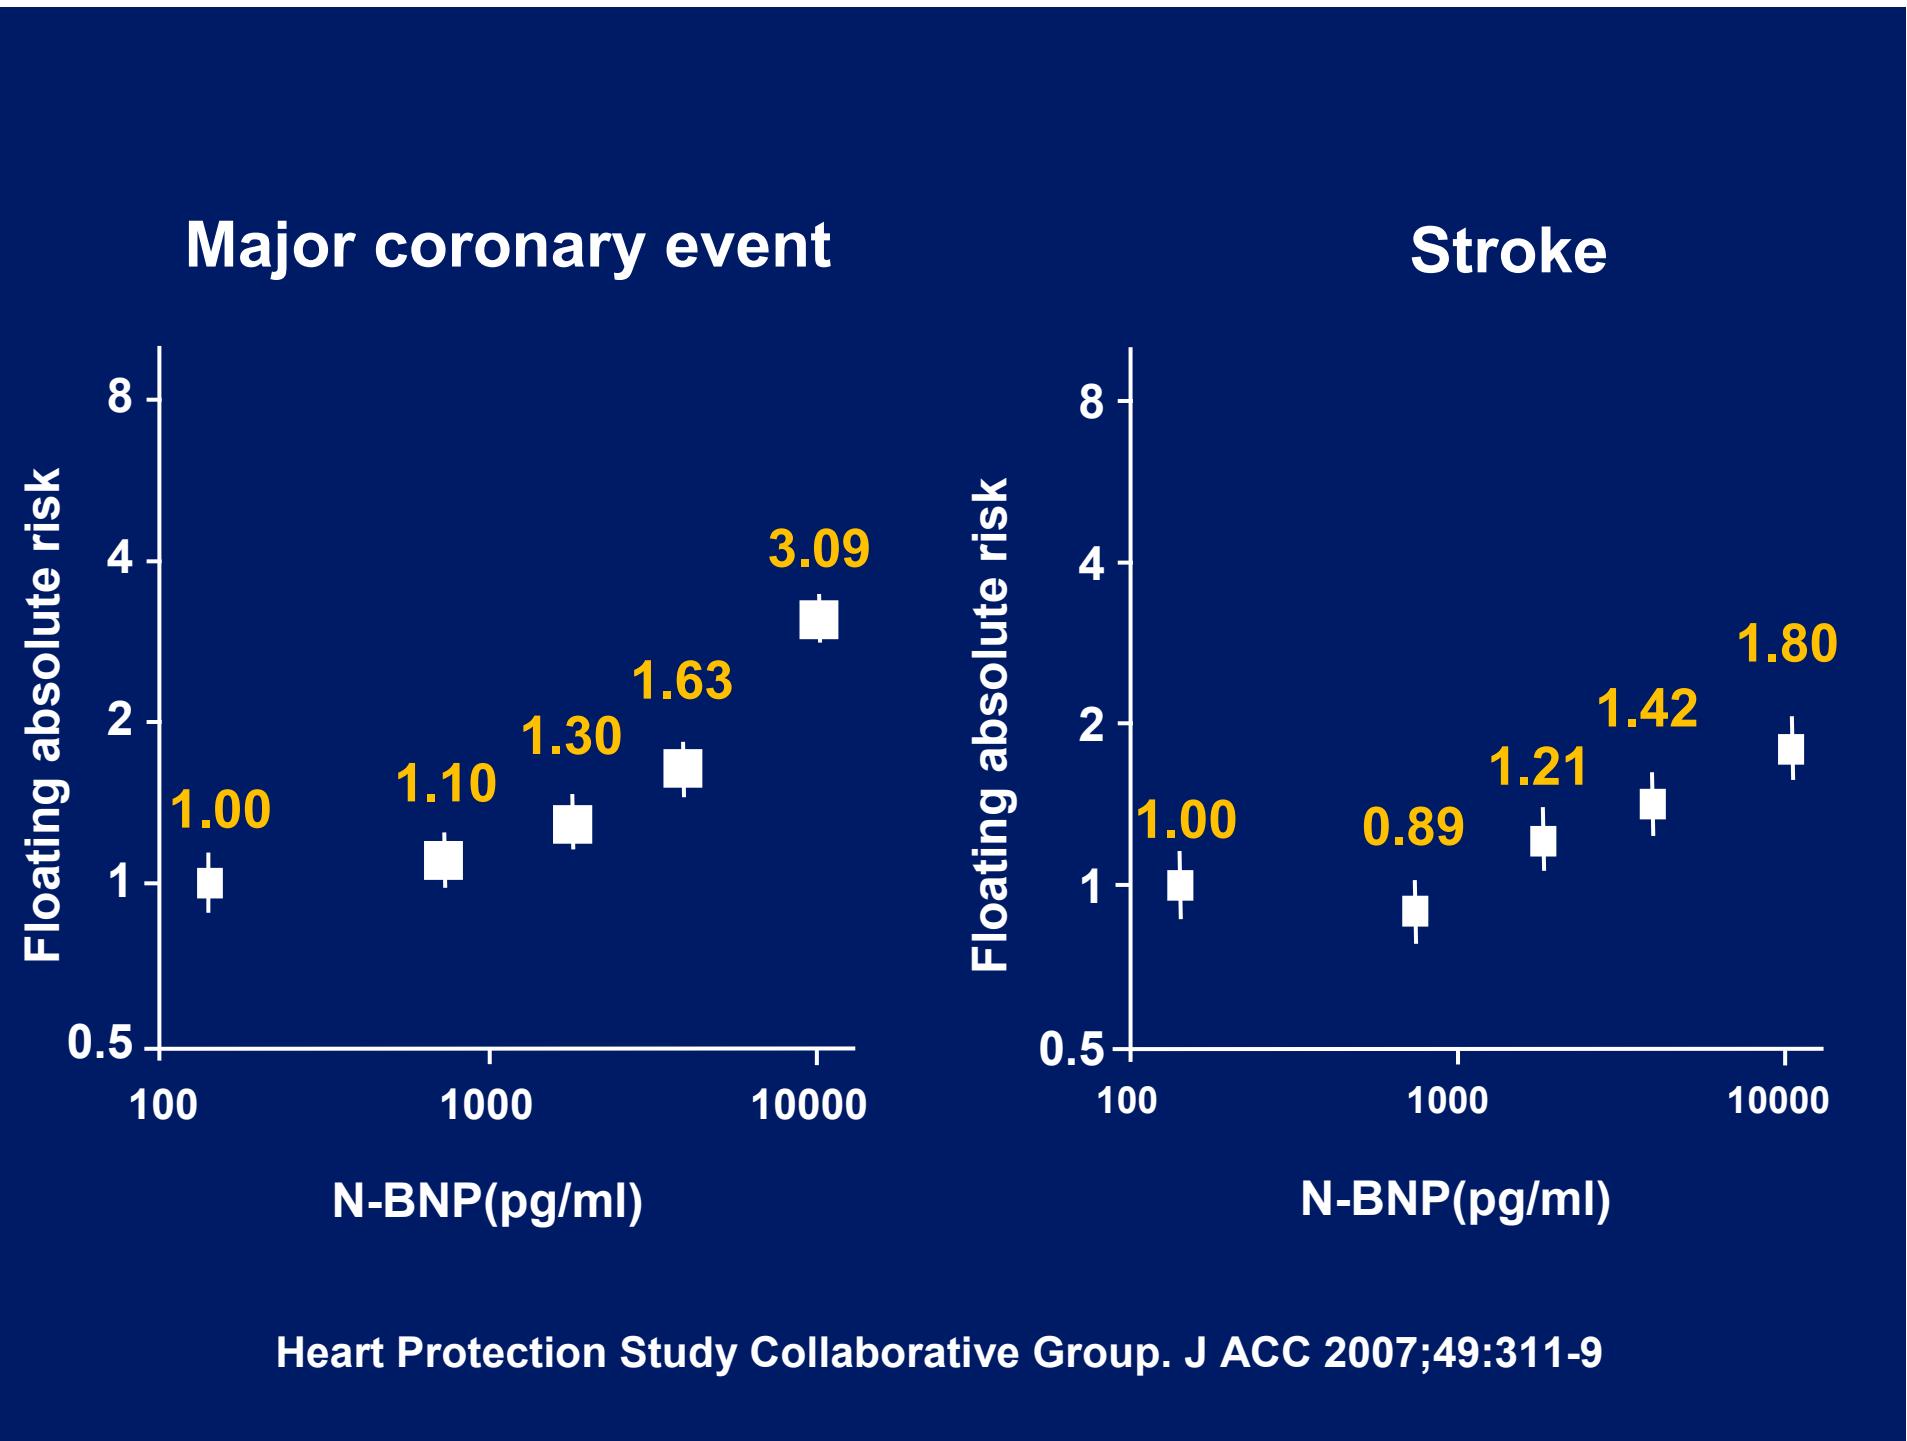

Large Studies to Confirm the Prognostic Value of BNP in Stable Coronary Disease

Study	No.	outcome	measurement
Richards et al.	1049	Mortality, HF	Both

HOPE	3199	CVD events	NT-proBNP
Marz et al.	1641	Mortality	NT-proBNP

NT-proBNP as a Strong Indicator of Future Vascular Events (Heart Protection Study)

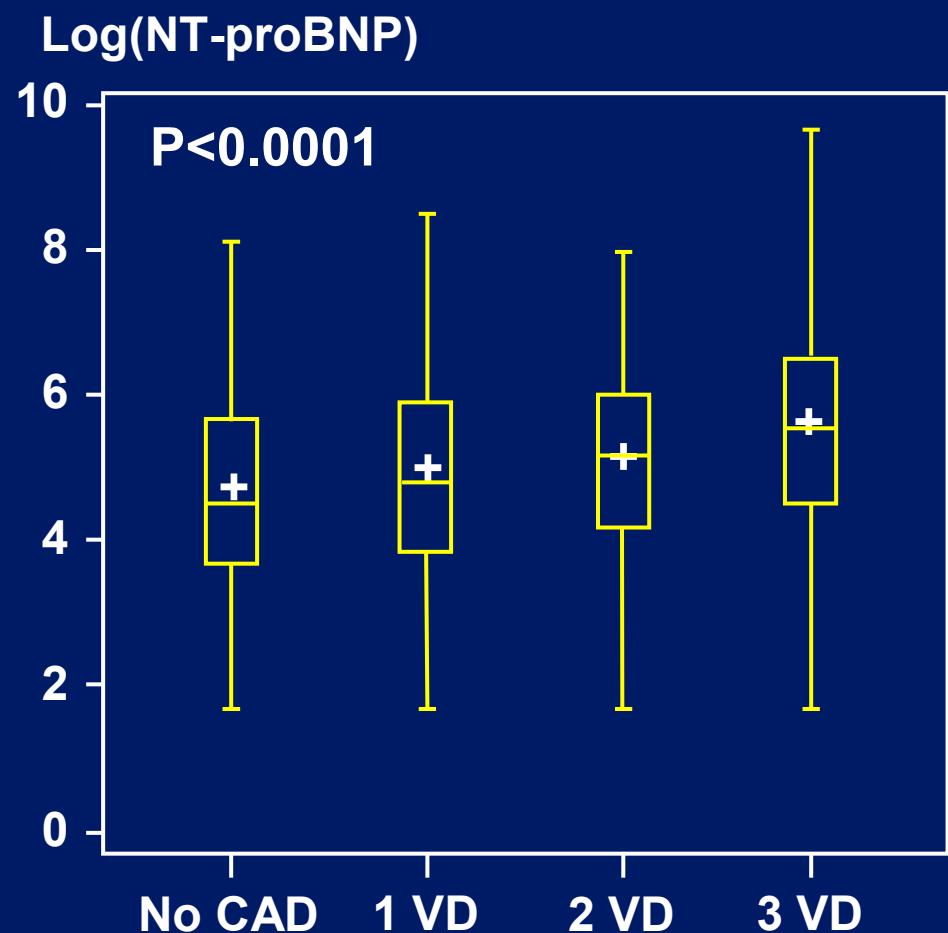

Heart Protection Study Collaborative Group. J Am Coll Cardiol 2007;49:311-9

BNP as a screening test to diagnose CAD

N = 1034

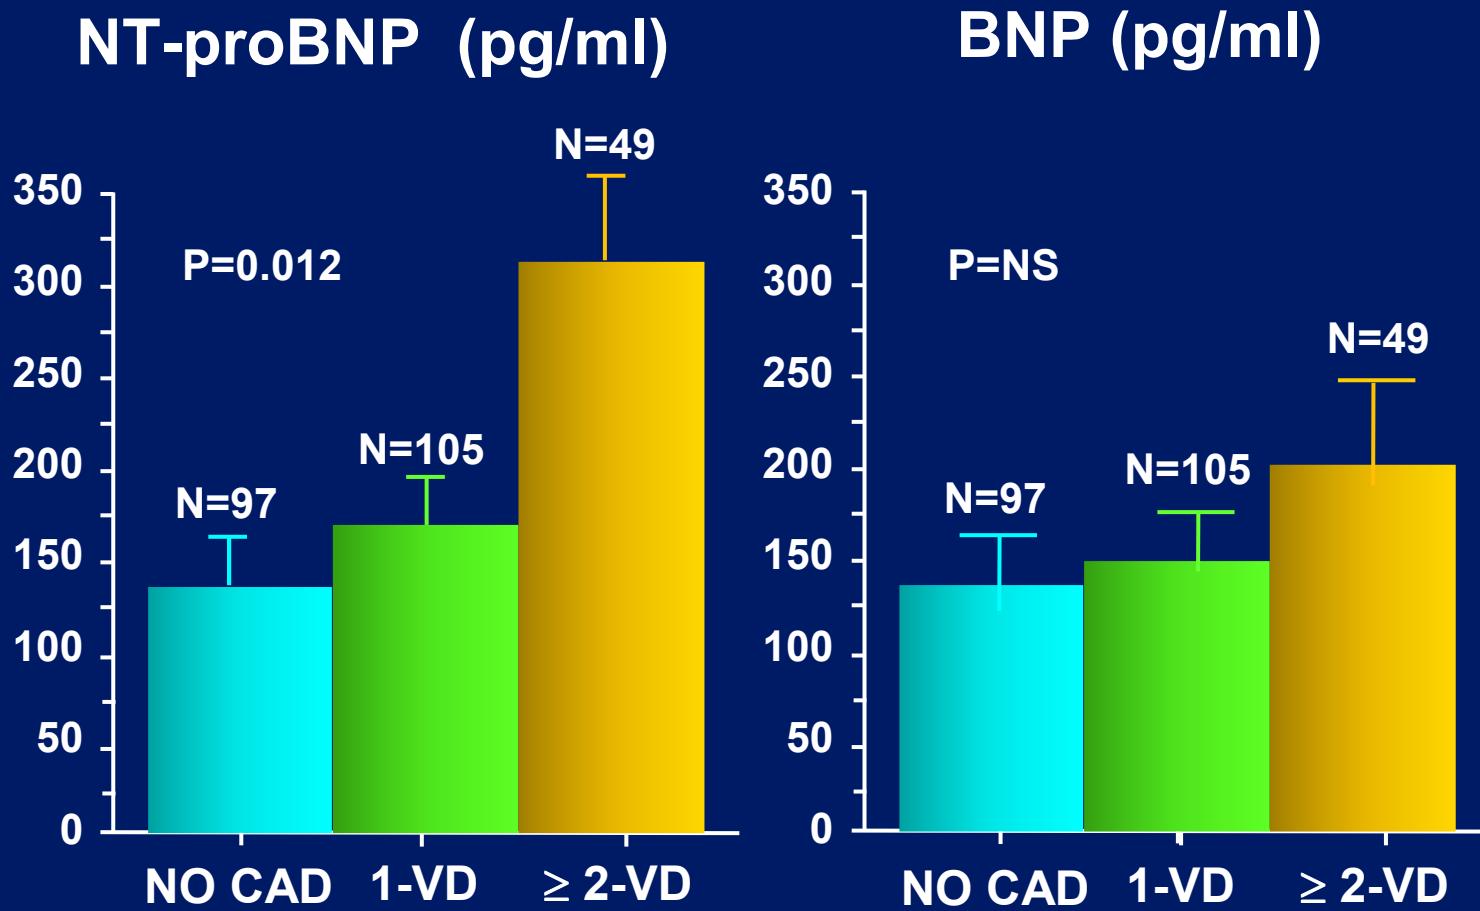

NT-ProBNP (pg/ml)	Sensitivity(%)	Specificity(%)	Accuracy(%)
125	61	60	61
100	66	52	73
70	76	42	69
45	86	28	74
30	91	20	77

Kragelund C et al. Am Heart J 2006;151:712.e1-e7

BNP or NT-ProBNP ?

Plasma NT-proBNP might be superior to BNP to assess disease severity of CAD (n=251)

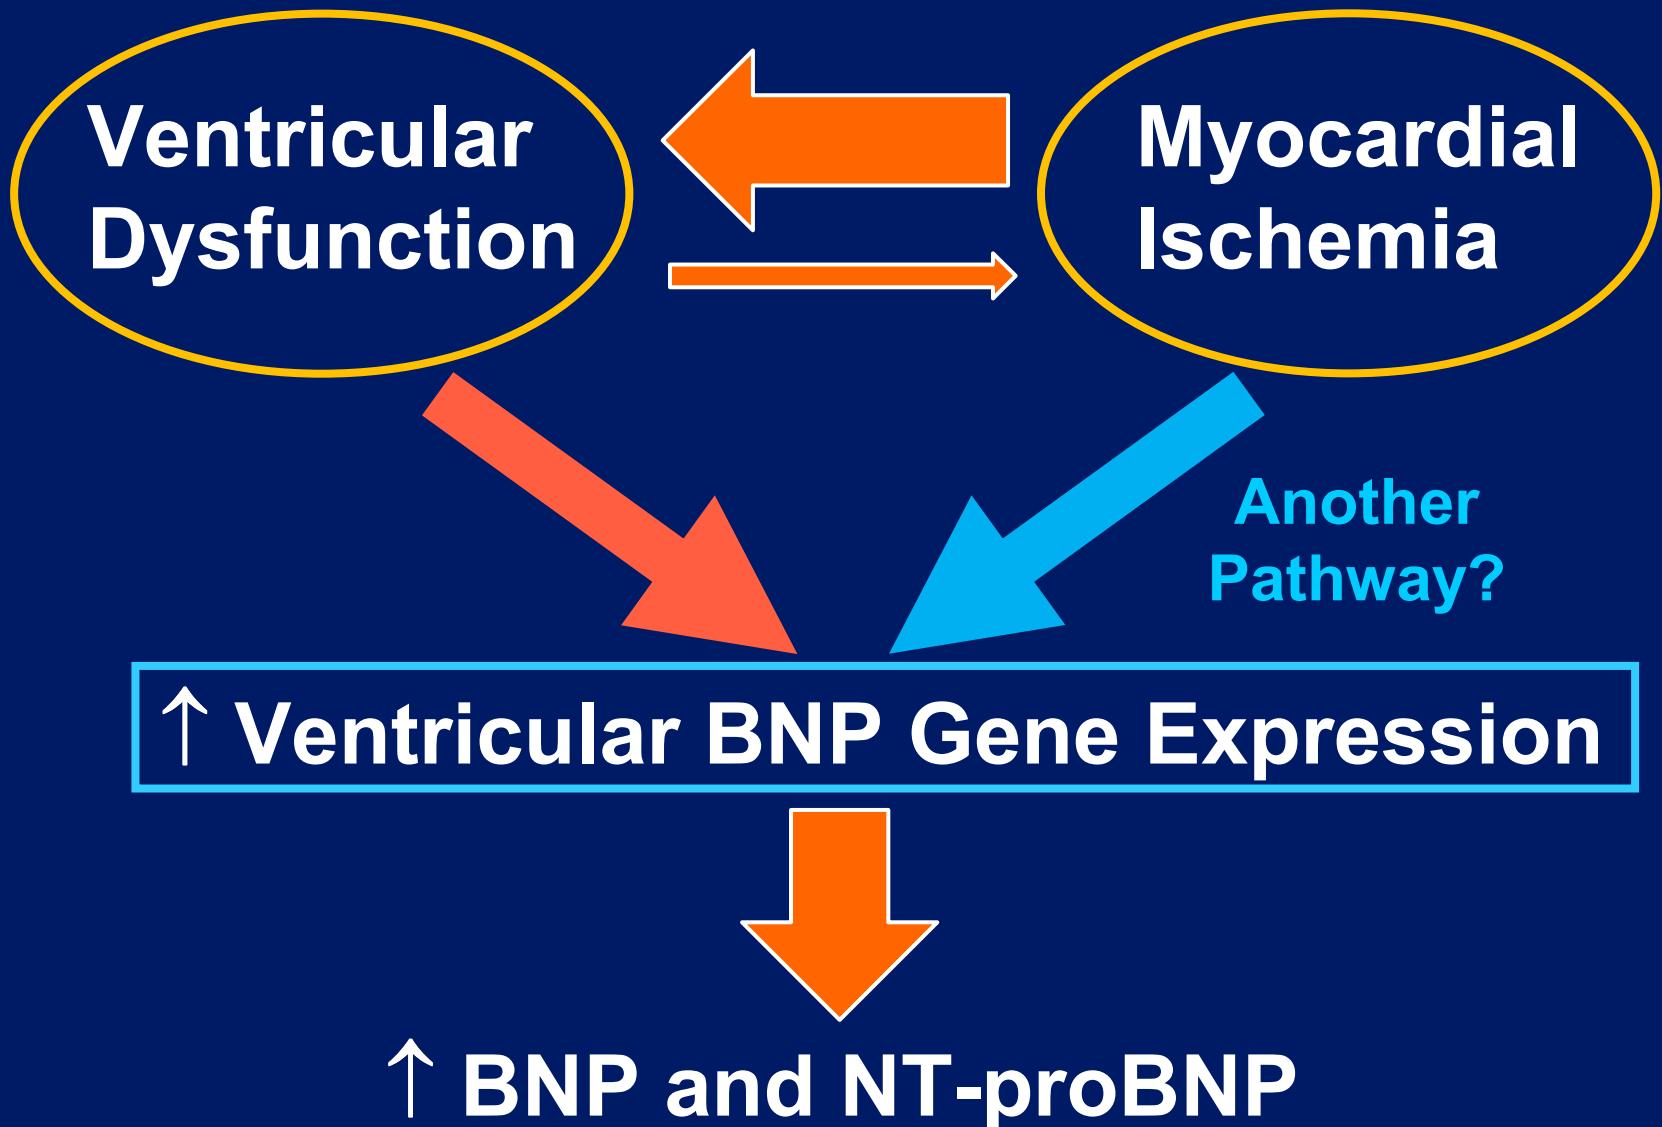

Sakai H et al. Circ J 2007; 71:499-505

BNP or NT-ProBNP ?

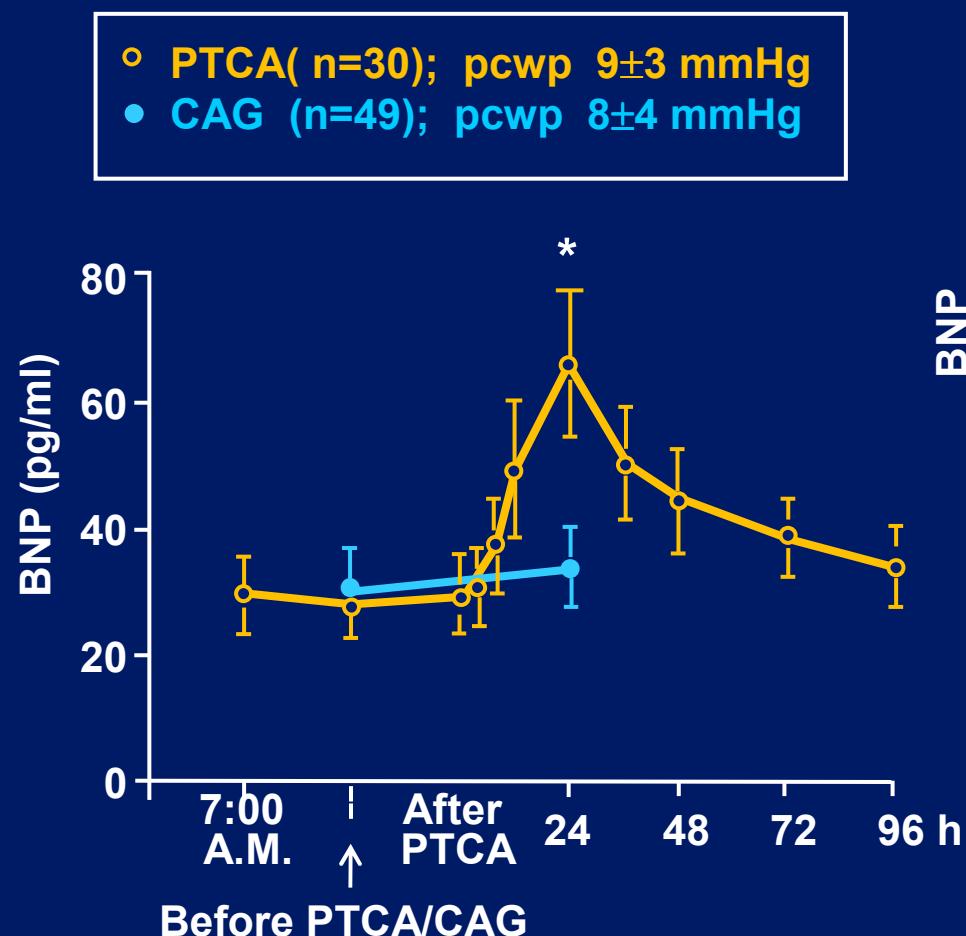

Multivariate Analysis in PEACE Trial

Outcome	BNP		NT-ProBNP	
	HR(95%CI)	p value	HR(95%CI)	p value
Cardiovascular mortality	1.06 (0.87-1.28)	0.57	1.69 (1.38-2.07)	<0.001
Fatal/nonfatal MI	0.91 (0.77-1.07)	0.24	1.02 (0.87-1.19)	0.84
Fatal/nonfatal CHF	1.62 (1.32-1.97)	<0.001	2.35 (1.86-2.98)	<0.001
Fatal/nonfatal stroke	1.15 (0.91-1.45)	0.24	1.63 (1.26-2.12)	<0.001

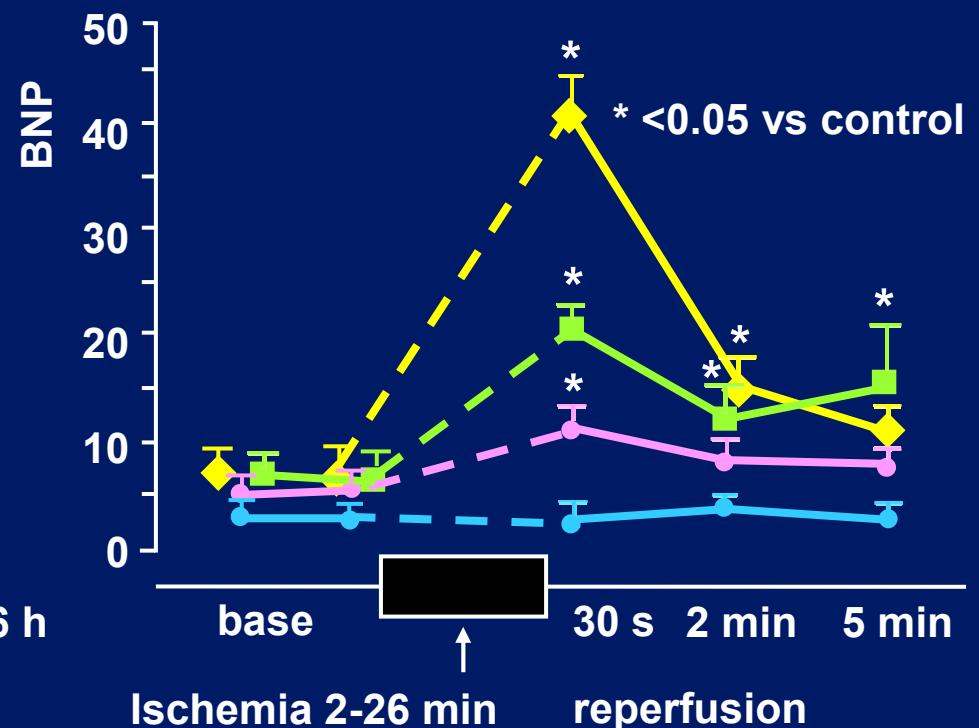

Elevated BNP in Myocardial Ischemia

Myocardial Ischemia vs LV filling pressure

20 min ischemia	$\Delta\text{LVEDP} > 10$ mmHg
5 min ischemia	ΔLVEDP ; no change
2 min ischemia	ΔLVEDP ; no change
no ischemia	ΔLVEDP ; no change

Tateish J et al.
Clin Cardiol 2000;23:776-780

D'Souza SP et al.
Am J Physiol 2003;284:H1592-H1600

Suggested Reason for Elevated BNP in Myocardial ischemia and CAD

- ◆ Myocardial ischemia augment BNP gene expression and release (Cardioprotection ?)
- ◆ Atherosclerotic plaques stimulate BNP synthesis and release (protective effect ?)

Schirger JA et al. JACC 2000;35:796-801

- ◆ Hypoxia is a direct stimulus for BNP release from human cardiac myocyte

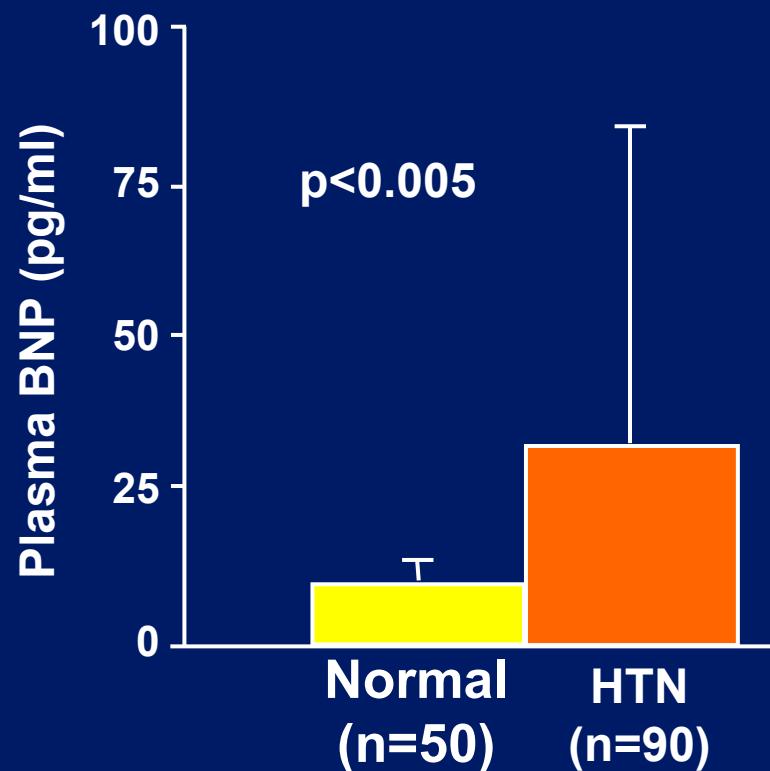

Hopkins WE et al. Circulation 2004;109:2872-2877

Summary

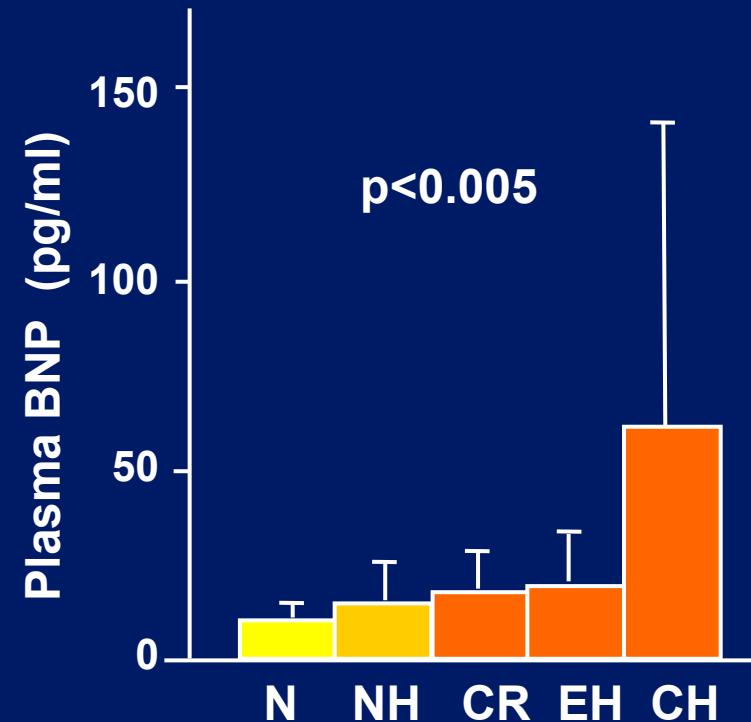

Role of BNP in Coronary Disease

- ◆ BNP has a strong prognostic value in CAD
- ◆ To diagnose ACS, BNP is useful in case of non-diagnostic conventional markers
- ◆ Elevation of BNP in CAD may related to both LV wall stress and myocardial ischemia itself
- ◆ Threshold of BNP and sampling time have to be resolved for future studies

Impact of LV Geometry on Plasma BNP in Patients with Essential Hypertension

Nishikimi T et al.
Hypertension 1996;28:22-30

N	no HTN
NH	HTN with normal geometry
CR	Concentric remodeling
EH	Eccentric LVH
CH	Concentric LVH

Prognostic Value of 4 Different LV Geometry

BNP as a Prognostic Marker in Hypertension

N=569; 50-89 yr-old

EF > 50%

Composite End-Point
stroke/TIA
MI
All cause death

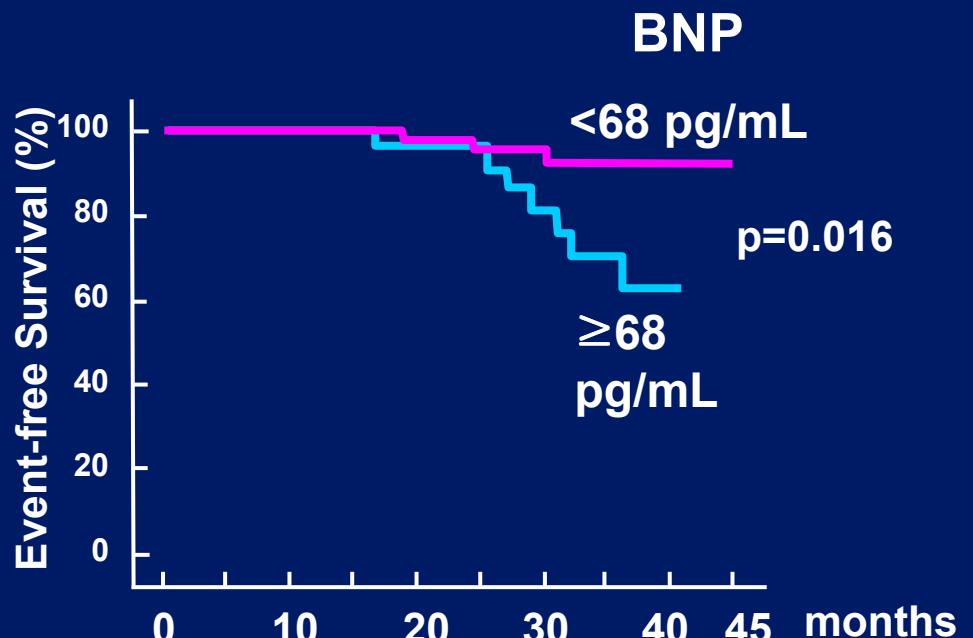

Pedersen F et al. J Card Fail 2005;11(suppl 5):s70-s75

BNP as a Prognostic Marker in Hypertension

Multivariate Analysis for cardiovascular events

	Risk Ratio (95% CI)	P value
Pulse pressure	1.050 (1.009-1.091)	0.015
LVMI	1.020 (1.000-1.040)	0.049
BNP	1.011 (1.004-1.017)	0.001

Survival curve in old age with hypertrophy

Suzuki M et al. Hypertens Res 2002;25:669-676

Cardiac Influence of Hypertension

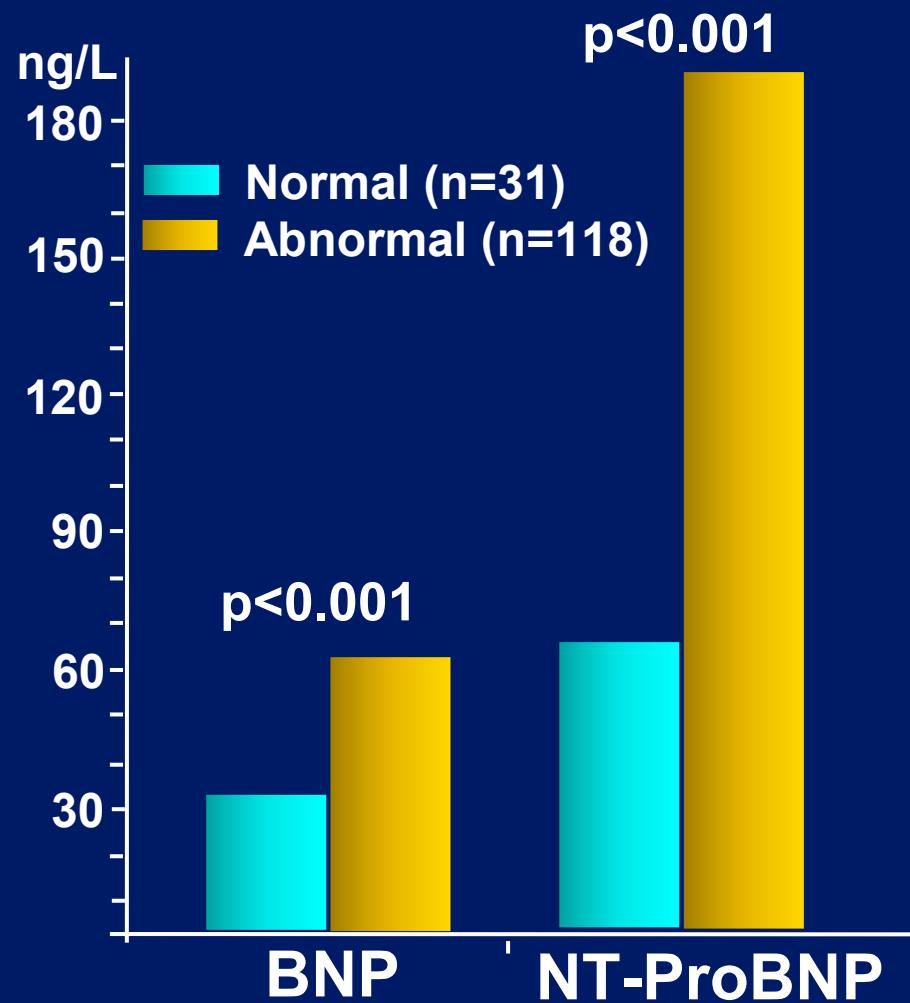

Screening Strategy of BNP Indicating Structural Abnormalities in Hypertension

N = 149

Asymptomatic HTN

Structural Abnormalities

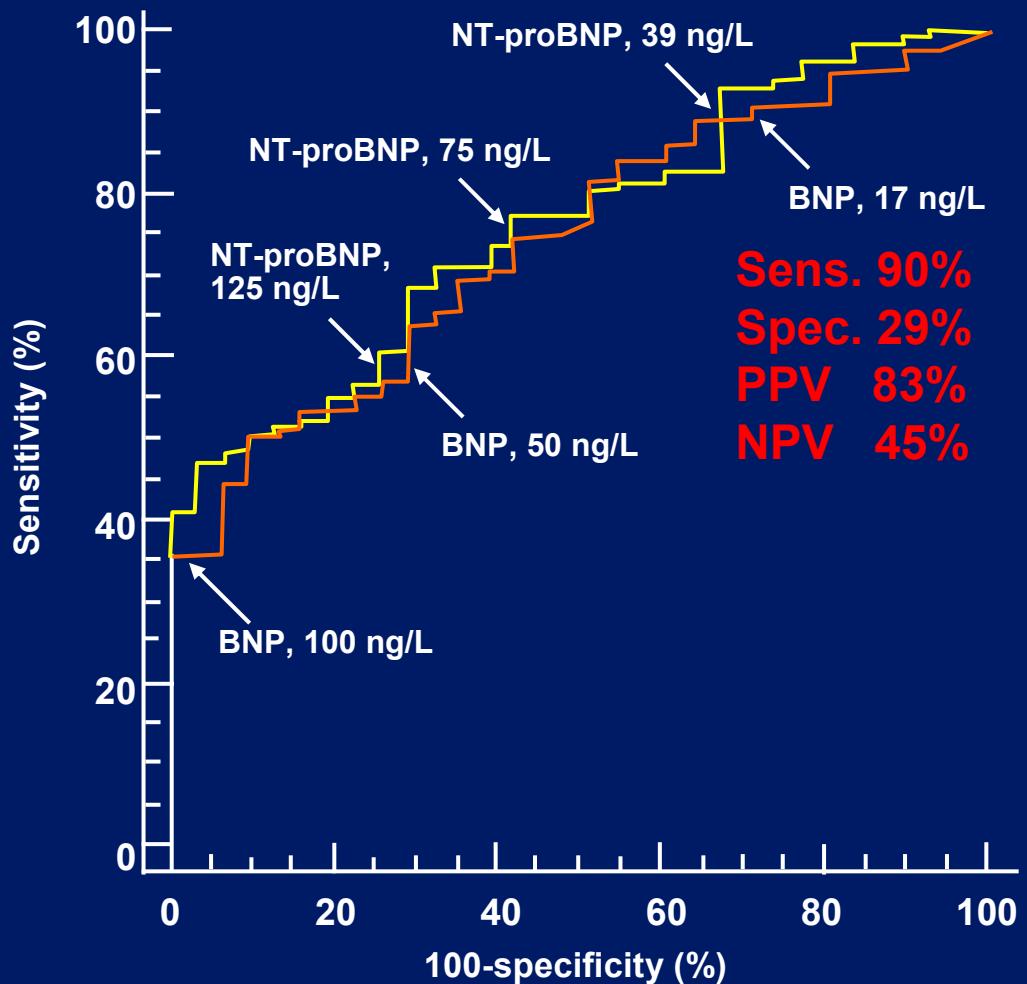

- Systolic dysfunction
- Diastolic dysfunction
- LA enlargement
- LV dilatation
- LV hypertrophy
- Pulmonary hypertension

BNP might have limited value for screening of cardiac abnormalities in hypertensives

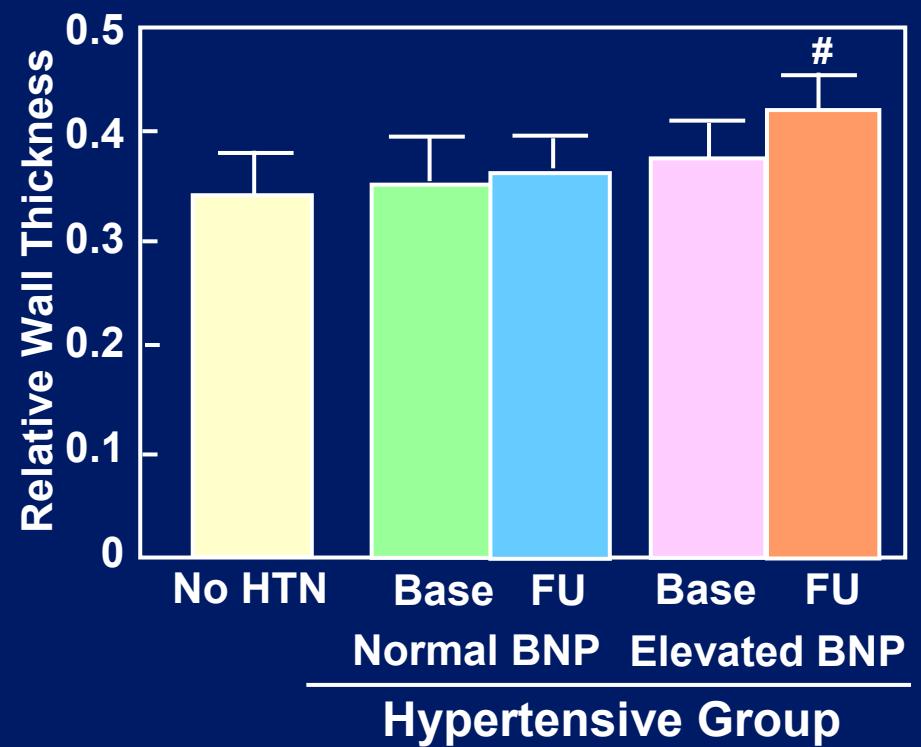

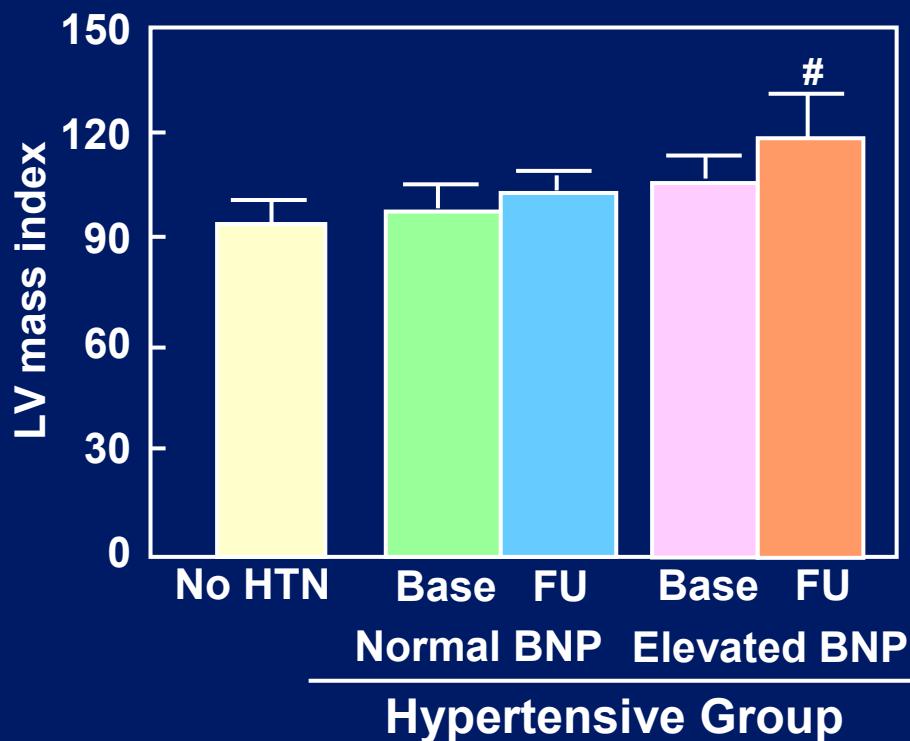

AUC of BNP
0.740 (CI 0.662-0.808)

AUC of NT-ProBNP
0.762 (CI 0.685-0.828)

Progression of LVH Related to Baseline BNP in Hypertensive Patients (n=82)

Multivariate analysis showed only BNP at baseline were independently related with progression of LVH ($r=0.78$; $p<0.01$) after adjusting various clinical parameters

BNP and BP Tracking (Framingham HS)

**Higher BNP in non-hypertensives is associated with increased risk of BP progression in men but not women
(4 year follow-up, n=1801)**

Plasma BNP Category	Men Odd Ratio	Women Odd Ratio
C 1	1.0 (referent)	1.0 (referent)
C 2	0.68 (0.43-1.07)	0.98 (0.67-1.44)
C 3	1.51 (0.99-2.28)	1.09 (0.75-1.60)
C 4	1.37 (0.89-2.12)	0.92 (0.61-1.36)
Trend across categories	1.15 (1.00-1.32) <i>P=0.046</i>	0.99 (0.87-1.12) <i>P=0.82</i>

Summary

Role of BNP in Hypertension

- ◆ BNP is elevated in HTN, especially associated with structural changes including LVH
- ◆ BNP is a prognostic marker in HTN
- ◆ Elevated BNP in HTN predicts LVH progression and in normotension predicts HTN progression
- ◆ Screening strategy of BNP, however, in HTN is not recommended.
